CEIT 435 – One-Page Project Info Page Guide
(Single HTML File · Draft Version – Will Be Updated in Final Submission)

---

1. Purpose
You will create a **single-page project information page** using **only one HTML file**. This is your **draft version**, and it **will be published** on the [course website](). At the end of the semester, you will **update it again** for your **final project submission**. This info page must be prepared in **English**.

This page should clearly introduce your project idea in a simple, structured, and visually clean way.

---

2. Required Sections (in order)
Your HTML page must include the following sections:

A. Project Title
- Clear and short (max. 10–12 words)
- Displayed prominently at the top

B. Team Information
- Group Name (optional)
- Team Members
- Contact Email *(This should be the official project email address. You may create a new address and forward it to your personal emails.)*

C. Project Summary (Short Abstract)
1–2 short paragraphs explaining:
- The problem
- The target users
- Your main idea
- Why the project is meaningful

D. Key Features
List **4–6 key features** of your planned product.

E. Technology Stack
State the tools/technologies you will use, such as:
- **Core Web Technologies:** HTML, CSS, JavaScript
- **UI Libraries / Frameworks:** Bootstrap or other CSS/JS libraries (optional)
- **Backend / Database:** Firebase, simple server-side APIs, or any planned data storage approach

F. Target Audience
Describe who will use your system.

G. Visual Mockup / Sketch
Include **at least one image** representing your project (e.g., a Figma mockup, wireframe, or simple diagram). Add a short caption describing the image.

3. Optional Sections (Add if needed)

These are **not required**, but you may include them if they help explain your idea:

- **Timeline or Milestones**
- **User Scenario / Use Case Example**
- **System Architecture Diagram**
- **Risks / Constraints**
- **Design Principles**
- **Future Vision / Out-of-Scope Items**

Feel free to add any additional section that supports understanding your project.

4. Submission Requirements

Single HTML File Only

Submit **one .html file** containing:

- HTML structure
- CSS inside a <style> tag
- Optional JS inside a <script> tag
- Optional libraries via CDN (Bootstrap, icons, etc.)

✖ No separate CSS/JS files

✖ No ZIP files

5. Design Expectations

Keep your one-page:

- Clear
- Readable
- Visually tidy
- Simple and consistent

You may use:

- Cards
- Grid layouts
- Intro banner
- Basic colors and spacing

No advanced design is expected — clarity is more important than decoration.

6. Submission Instructions

This is your **draft**. You will revise it again in the **final project submission**.

Submit **one single HTML file** named: **groupX.html**

Example: group1.html

Before submitting:

- Test the file in your browser
- Ensure images load
- Ensure layout and CSS work
- Ensure external CDNs load (if used)

Upload your HTML file to **ODTÜClass**.
